

Incidents and disputes happen. And when they do, there are two things that give you the edge — speed and accurate information. PortVision can help on both counts.

Play back any incident on the waterway, down to the minute, up to five years in the past. Zoom in and zoom out, forward, back, freeze that moment in time. Once PortVision shows you what you are looking for; simply create a documentation packet of the incident to support investigation, negotiation, even litigation. PortVision gives you the power of complete historical reporting of every vessel movement including terminal arrivals, departures, and passings by key points-of-interest. And best of all PortVision's legal support team is available to assist with incident review, documentation, and expert testimony to give you the edge you need.

#### PortVision has been successfully used to support the following cases:

Demurrage Disputes	Dock/ATON Damage	Bridge Allision
Contract Disputes	HR Matters	Collisions
Spill response	Response Documentation	Law Enforcement
Personal Injury	Groundings	Wake Damage

#### Features

- Review an incident online to verify facts using objective data captured directly from each vessel. Up to 5 years of historical position and speed data for all AIS-enabled vessels
- Identify impacted vessels and potential witnesses
- Verify claims
- “Replay” collisions and see vessels as they interact with each other
- Review actual movements, arrivals, departures, and passings as objectively reported by each vessel AIS transponder
  - Perform forensic analysis and generate documentation in various view options (chart, Google map, satellite) as needed
  - Leverage PortVision's legal support team for case review, analysis, data authentication and expert testimony
