

The power of PortVision. You have already used PortVision for real-time visibility and historical reporting of AIS-enabled vessels in ports and inland waterways. Now you can extend the power of PortVision to your entire ocean-going vessel fleet. **PV-Onboard Global** enables global tracking of your fleet using the familiar PortVision display. Incorporate our satellite tracking units, or integrate with existing GMDSS/SOLAS compliant hardware already on each vessel. Your fleet will be visible within PortVision, seamlessly transitioning between AIS and worldwide satellite tracking as required.

View your ocean-going fleet in an easy-to-use web-based platform, or harness the power of PortVision to integrate your ocean fleet into the PortVision view of all vessels and gain a competitive edge. Provide visibility of your ocean fleet to your dispatchers, managers - even your customers.

PV-Onboard Global provides:

- Full visibility of your ocean-going vessels worldwide, 24/7
- Increase efficiency, safety, and resource utilization
- Enhance customer service by bringing the benefits of vessel tracking to your customers and partners
- No capital expenditure required if Inmarsat GMDSS/SOLAS equipment is already onboard.

Features

- Access your fleet from any Internet-connected PC, PDA, or web-enabled mobile phone
- Fully integrated into PortVision
- Worldwide coverage
- All PortVision features extended worldwide, including vessel locating and historical reporting
