

PortVision offers a special program for PortVision Advantage users who are responsible for emergency response. **PortVision Incident Response** is an integrated bundle of products, services, and support to aid our customers during both response drills and active incidents. PortVision Incident Response includes the following:

- PV-OnBoard hardware expedited to facilitate tracking and monitoring of all response vessels and equipment (barges, tugs, service boats, etc.)
- Immediate availability of up to 10 temporary PortVision and PortVision Advantage user accounts for use by management and response personnel
- Unlimited incident support provided by standard PortVision support personnel via telephone and e-mail
- Access to on-site FEMA-certified ICS support personnel as required for startup, training, and operational support
- After-incident support for post-mortem analysis, reporting, and archiving

Benefits

- Enhance visibility of all response vessels and equipment during a response
- Manage vessel traffic in remote areas from the “command post”
- Provide managers in “headquarters” or offsite locations access to see the current position of assets and impact to local waterway users
 - Significantly increase value of briefings and management reporting through real-time mapping, graphics, and incident data
- Enhance safety - Set up a safety zone and receive real-time alerts when any vessel penetrates that zone
 - Increase compliance of response vendors – track and manage every asset involved in the response
 - Support post-incident investigations using playback and historic reporting tools. Produce objective third-party documentation to support enforcement, negotiation, and litigation
 - Validate claims by verifying vessel locations before, during, and after an incident

PV-OnBoard

PV-OnBoard is a battery-operated satellite transmitter with the power of PortVision. It easily attaches to any asset, including barges, tugs, containers, and incident response equipment. Once attached, PV-OnBoard transmits location information throughout each day from anywhere in North America and Europe. No AIS transponder is required.

View assets in an easy-to-use web-based platform, or harness the power of PortVision to integrate into the PortVision view of all commercial vessels. Provide visibility of your assets or fleet to dispatchers, managers, incident response personnel, and customers.

Features

- Full visibility of all equipment and assets, optionally integrated into the PortVision display with AIS-equipped vessels
- Portable asset tracking – just mount and forget
- Incorporation of all incident response assets into a common operating picture
- Increase compliance of response vendors – track and manage every asset involved in the response
 - Web-based and mobile access from any Internet-connected PC
 - Battery-operated, with no external power source needed. Up to 5 years of battery life
 - Full coverage across North America and Western Europe
 - Mounting options include double-sided adhesive, screw-mount, or portable magnet/velcro mount
 - Intrinsically safe, UL Class 1 Division 1, Groups A-D
 - Small physical size: 6.5" x 3.25" x 1"
